

## Homework 2

### Problem 2.2

#### Solution:

To instrument a code I run `afl-gcc -o stats ./stats.c`. Further I created a folder named `input` and generated 4 test cases:

```
"1 2 3\n 4 5 6\n7 8 9"  
"1 2 3 4\n 4 5 6 7\n 7 8 9 10"  
"  
"1"
```

I provided expected input, and one case that is incorrect.
